

Arizona Wildlife Podcast Comprehension Activity

Episode 17: Bald Eagle Biology

Part A: Determine whether each statement below is true or false. If it is false, correct the statement so that it will be true.

1. Bald eagles belong to a group of birds known as sea eagles.
2. Bald eagles found in the southern portion of the United States tend to be smaller than those found in the northern portion.
3. Male eagles are usually larger than female eagles, which makes them better hunters.
4. If they can survive past their first year, many eagles will live to at least thirty years old.
5. Bald eagles will eat road kill.

Part B: Define each of the terms below.

1. Morphology
2. Opportunistic
3. Productivity

Part C: The circle below is a blank pie chart. Using the labels provided, shade the circle to represent the percentage of a bald eagle's diet that comes from fish.
