As razorback suckers grow they change. Can you see the changes?

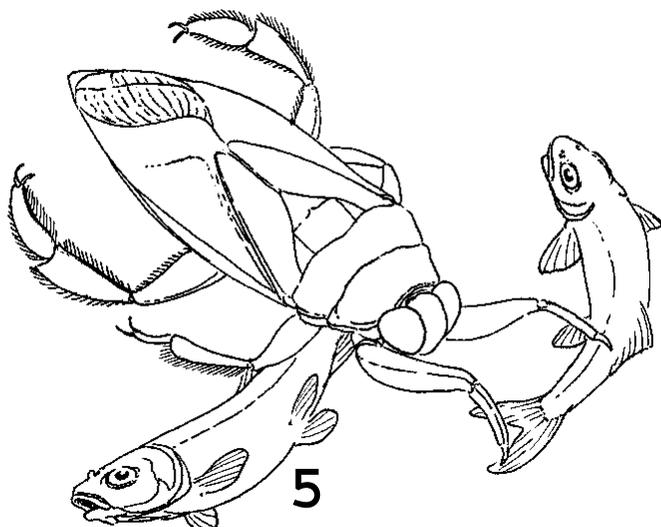

The Life of A

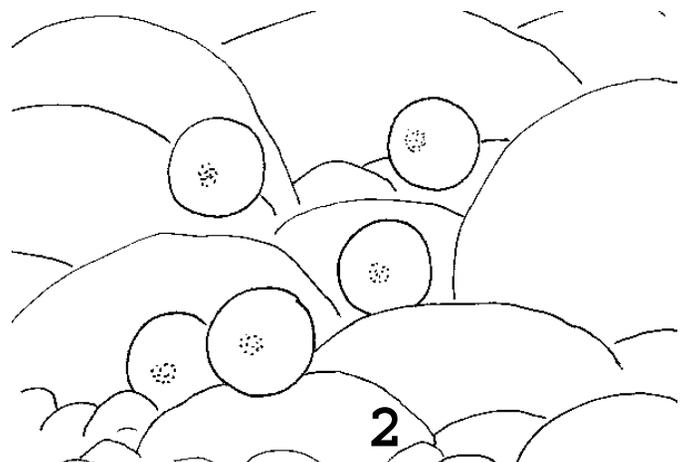

Razorback Sucker

One predator of small fish is the Giant Water Bug.

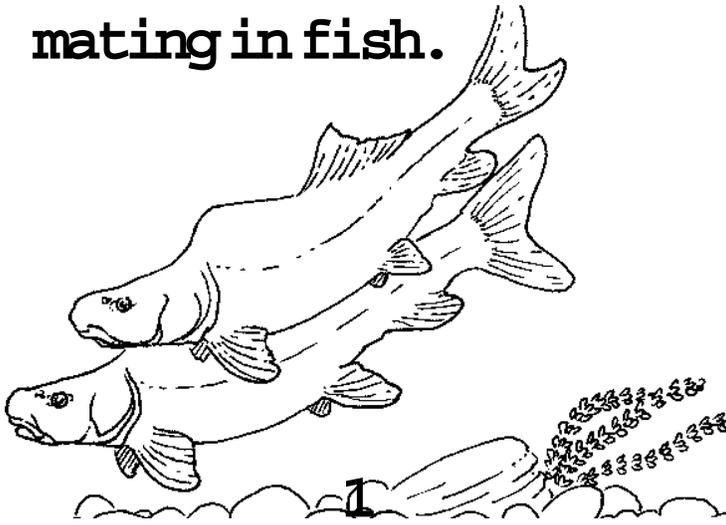

Eggs stick to the gravel. They are well hidden.

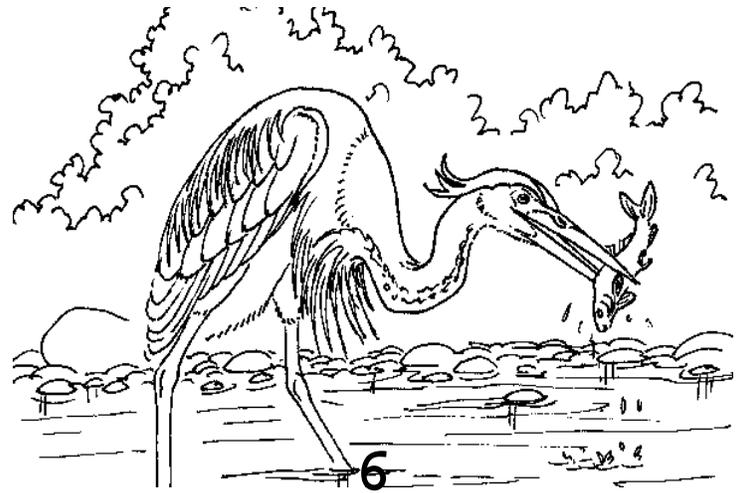

Directions: Color the pictures. Then cut along the DOTTED lines. Fold each strip in half so that you will see one picture on each page. Make sure that the cover is on the front and the pages are in the correct order. Then staple your booklet together. Artwork was drawn by Randy Babb.

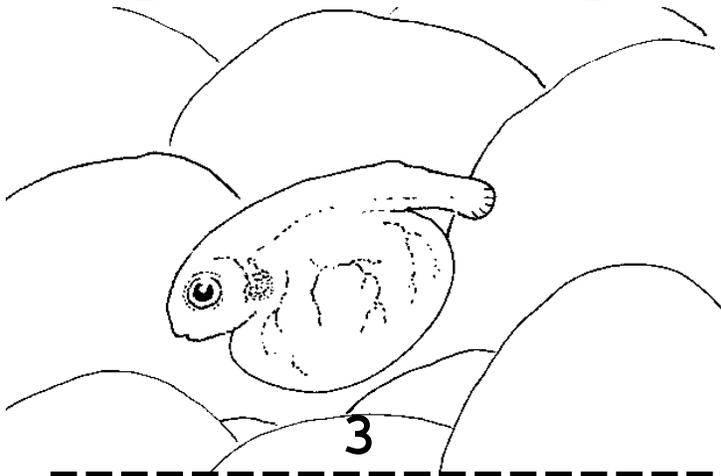

Razorback suckers spawn over gravel bottoms. Spawning is mating in fish.

Great Blue Herons are predators of larger fish.

Baby fish have a large yolk sac when they hatch. The yolk sac will disappear in a few days.

Young fish eat algae and small insects. Young fish also hide from predators.
